

## Auxiliary Controllers

- Collect data on critical components and vehicle health providing insight to keep systems in optimal working order.
- Decrease vehicle downtime with electronics troubleshooting and support.
- Real-time notifications, run-log recording, and secure over-the-air device updates.
- Integrates with IDEX rescue tools – show current tool cycle and condition for optimal maintenance.
- As soon as a trouble code is detected, a notification is sent to the designated recipient so they can quickly prioritise breakdown repairs.
- Vehicle comparison mode makes decisions in fleet deployment simple.
- Powered by Microsoft's cloud computing platform Azure.

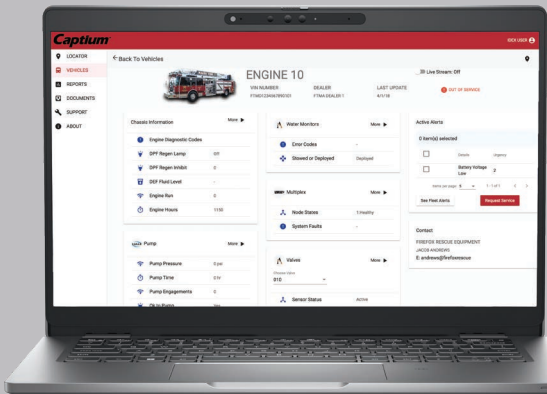

Captium

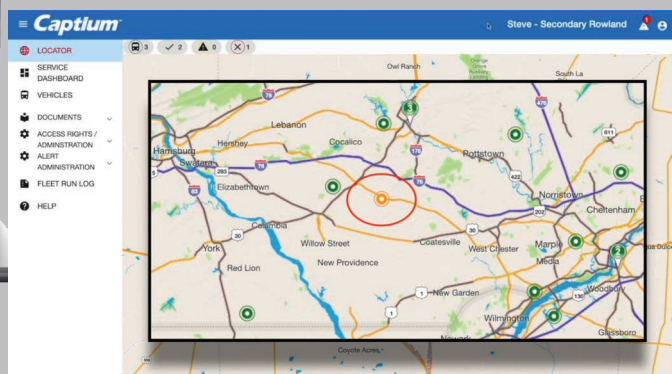

**Voltage :** 9–32V  
**Current Draw :** 5A @ 13.8V  
**CAN :** SAE J1939  
**Construction :** Aluminium  
**Ingress Protection :** IP67  
**Operating Temperature :** -40°C to 85°C

IP67 9V 32V

## Captium – Smart, Real-time, Remote Access to Asset Data

Connect to assets in the field remotely using the dedicated Captium software. View in real-time assets on a map to a precise level of accuracy. Bring up details on each vehicle showing what components are installed and what their current condition is.

Using the dashboard, track preventive maintenance schedules, identify mechanical issues before they become larger problems and detect trends associated with repairs.

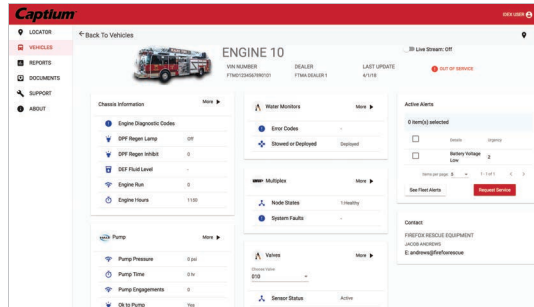

Notify key people that a problem has occurred, or is happening in real time so the appropriate action can be put in place.

- Monitors the health of:
- Chassis health and diagnostics
  - Critical electrical controllers
  - Multiplexing systems
  - Water flow components

- Ideal for:
- First responders
  - Fire chiefs & staff
  - Rescue tool distributors
  - Vehicle builders & dealers
